Application No.

Applicant(s)

Continuation of 5. does NOT place the application in condition for allowance because: In response to applicant's arguments that Stark is non-analogous art, the examiner respectfully disagrees. It has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See In re Oetiker, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Stark is cited to teach a medical device comprising a local handheld computer 20 having a data structure that can store the patient monitoring results (step 3 in fig. 1, col. 7, lines 15-18), which then communicates with another remote central computer 16 over the telephone line through modem connections (Internet) for further processing of the patient data (step 5 in fig. 1, col. 7, lines 32-52). Therefore Stark is in the medical field that utilizes medical instrument to treat patient just like the field of applicant's endeavor, and it is cited to address the particular application of using a local handheld computer having a data structure that can store the patient monitoring results, which then communicates with another remote central computer 16 over the telephone line through modem connections (Internet) for further processing of the patient data just like the applicant's system.

In response to applicant's arguments that Stark teaches away from key aspects of the present invention, the examiner respectfully disagrees. Stark teaches many embodiments, and while one of the embodiments (col. 10, lines 35-57) mentioned by applicant may not be applicable to the present invention, other embodiment taught by Stark are applicable and pertinent to the particular problem with which the applicant was concerned. This is exemplified by the teaching of using a local handheld computer 20 having a data structure that can store the patient monitoring results (step 3 in fig. 1, col. 7, lines 15-18), which then communicates with another remote central computer 16 over the telephone line through modern connections (Internet) for further processing of the patient data (step 5 in fig. 1, col. 7, lines 32-52), for the purpose of communicating patient information over the Internet in order to allow review by a treatment professional or to allow updating patient database (col. 7, line 50 to col. 8, line 3).

In response to applicant's argument that there is no motivation to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, it is unclear how the applicant can disregard the teaching of Stark as discussed above and Stark also clearly teaches (in col. 7, line 50 to col. 8, line 3) the motivation to combine the references, for the purpose of communicating patient information over the Internet in order to allow review by a treatment professional or to allow updating patient database.
